Infrastructure Grants

The U.S. Department of Energy Office of Nuclear Energy (DOE-NE) awarded \$6.3 million in infrastructure grants to 30 U.S. universities in FY 2009 through its Nuclear Energy University Programs (NEUP) initiative.

The intent of these infrastructure awards is to enhance the capability of the US university community to teach nuclear related science and engineering courses to ensure the next generation of scientists and engineers have the skills to meet industry needs, and to conduct cutting edge research in critical nuclear-related areas.

Awards were limited to one grant per university, with a maximum amount of \$300,000.

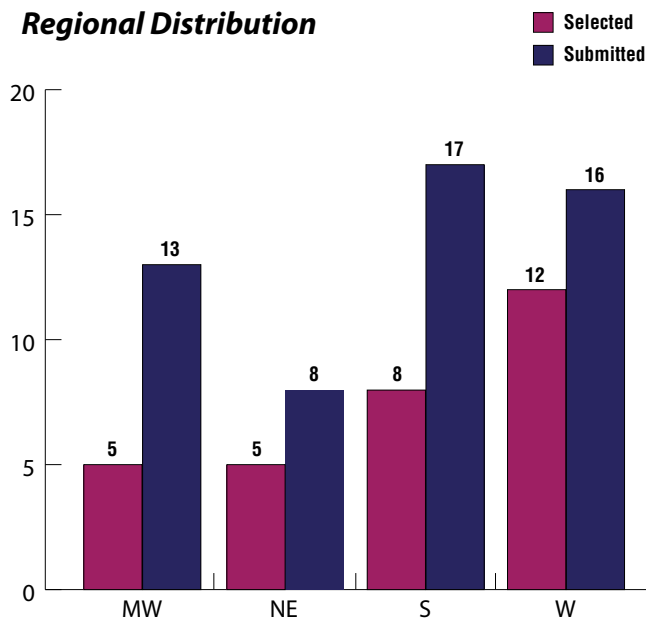

Infrastructure Facts

- 54 – Number of universities that applied for a NEUP infrastructure grant
- \$12.3 million – Total amount of funding requested by universities to upgrade equipment or purchase new equipment

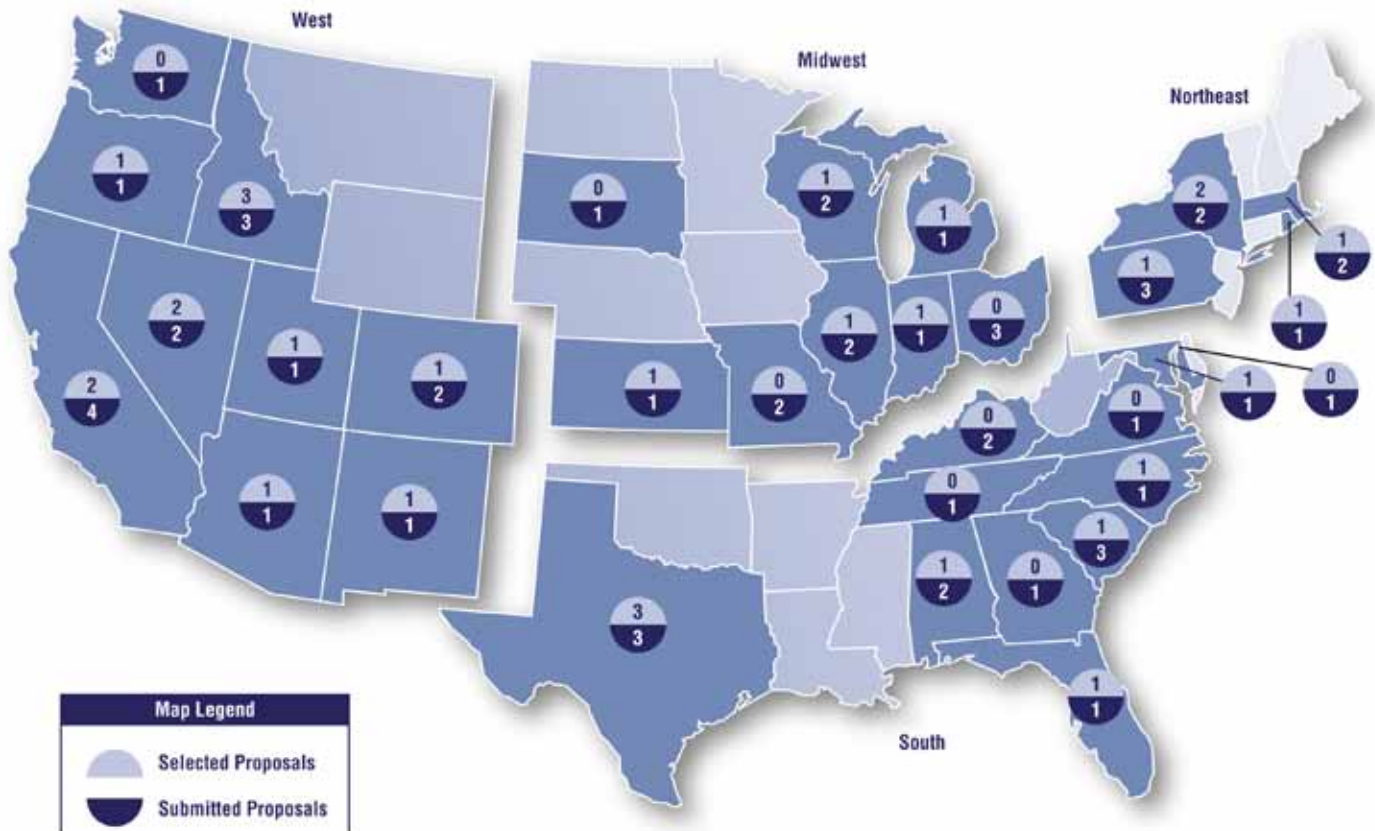

Review Process

Applications were reviewed by a selection committee to evaluate applications based on overall merit, planned use for the requested equipment, benefit to students, and whether it aligned with DOE-NE's mission.
